Luqman Bin Mohamed Ali

Oct 29, 2026 · @Luqman

Business AI Architect, Data and AI SEA

Singapore | luqman.mohdali@gmail.com | linkedin.com/in/luqman-mohdali | lookieman.github.io

Professional Summary

Enterprise architect with more than fifteen years in SAP data architecture, master data governance and consulting delivery, now focused on taking AI agents from discovery to production. At SAP, I am the point person for the AI Agent Lab in the South-East Asia market unit. I run customer discovery, define use cases and their value cases, set the architecture and governance controls on SAP BTP and Generative AI Hub, and lead build teams. I also work with regional leadership on go-to-market: I shape AI pursuits with account teams and build the assets that bring our team into new AI engagements. Earlier, I grew a data advisory portfolio to more than 600 consultant days in 15 months. MSc in Artificial Intelligence, NTU.

Career Highlights

- **AI agent delivery:** Ran discovery and defined AI agent use cases for four customers in SAP's AI Agent Lab: a global airline, a global consumer products manufacturer, a Korean food manufacturer and a national power utility.
- **Practice growth:** Grew a data management advisory portfolio from zero to more than 600 consultant days in 15 months.
- **Practice expansion:** Grew the SAP MDG practice in APJ from zero to about 10 engagements a year within three years.
- **First-of-kind delivery:** Delivered the first SAP MDG implementation in Australia and New Zealand, at Fonterra.
- **Applied AI evaluation:** Raised strict micro-F1 from 0.52 to 0.65 for biomedical information extraction with DSPy and GEPA (NTU MSc capstone).

Core Competencies

- **AI Agent Architecture:** agentic AI, LangGraph, DSPy, RAG, tool calling, A2A, MCP, LLM evaluation, human-in-the-loop design.
- **AI Governance and Security:** guardrails mapped to the OWASP LLM Top 10, human approval gates, principal propagation, MCP Gateway, landscape isolation, audit trails.
- **SAP Platforms:** SAP BTP (CAP, Cloud Foundry), SAP AI Core, Generative AI Hub, Joule, Integration Suite, S/4HANA, Datasphere, HANA Cloud, Business Data Cloud.
- **Data Architecture and Governance:** master data governance, SAP MDG, data quality, data products, row-level authorisation, data migration.
- **Discovery, Value and Go-to-Market:** use-case discovery, value cases, pursuit shaping, RFP and proposal input, account-team enablement, executive workshops.
- **Delivery Leadership:** gate-based delivery plans, RACI, build-team onboarding, multi-country teams, mentoring.

Professional Experience

SAP Asia Pte Ltd | Singapore | 2015 to present

Level: Senior Consultant (2015 to 2020), Principal (2020 to present). About 11 years in Data Management and Landscape Transformation (DMLT) before moving to Data and AI in June 2026.

Business AI Architect, Data and AI SEA | June 2026 to present

Point person for the AI Agent Lab in the South-East Asia market unit, from customer discovery through build to production, and a contributor to the team's AI go-to-market.

AI agent delivery

- Ran discovery workshops for four customer AI use cases. Applied a five-question method (trigger, inputs, difficulty, ground truth, cost of error) to decide where an agent adds value and where rules are enough.
- Lead the SAP build for two agents at a global consumer products manufacturer: an inventory shortfall agent and a credit-block release agent. Closed requirements with customer subject matter experts and set the solution design.
- Defined requirements and the target architecture for an airline cost-planning agent on SAP BTP with Generative AI Hub, Datasphere and Joule.

- Reviewed and consolidated the architecture for a Korean food manufacturer's SKU rationalisation agent before design sign-off.
- Assessed two customer-proposed AI use cases for a national power utility and recommended one for the pilot. AI fills only the judgement fields, rules fill the rest, and a person approves every transaction before the system creates it.
- Directed the AI governance design for the same customer: architecture, security and access, and guardrails mapped to the OWASP LLM Top 10. All tool calls go through one gateway, and every write runs under the approving user's identity.
- Maintain joint SAP and customer delivery plans with stage gates, an organisation-level RACI and a steering deck. The plans run to hypercare exit, not to test sign-off.
- Built a value case for four agents before build, with stated assumptions for the customer to validate.
- Set one design rule across engagements: code calculates every number, the language model explains and ranks, and a person decides.

Practice positioning and pursuits, with regional leadership

- Shaped AI and data pursuits with account teams, including an AI proof-of-concept position in an RFP response, a Business Data Cloud and Databricks target architecture for a public-sector division, and an MDG value acceleration proposal.
- Built the co-sell deck that brings CSMs and enterprise architects to the team for AI discovery workshops and agent activation.
- Built the agentic use-case portfolio and agent catalogue for regional leadership, and contributed content to a customer webinar on Joule for Consultants.

Team build and enablement

- Planned build resourcing across four concurrent Agent Lab engagements and onboarded build teams with a role-to-customer RACI, work packages and test levels.
- Designed and ran a two-week agent build programme for two new colleagues, with blind evaluation data sets and a held-back answer key.

Data Management Lead; Global MDG Services Owner and APAC Topic Lead for MDG | 2023 to May 2026

- Designed and launched a data management advisory portfolio that reached more than 600 consultant days in 15 months.
- Ran the global SAP MDG service offering and the APAC MDG topic, then handed both over to three successors in May 2026.

- Built LLM accelerators for consultants: a statement of work draft generator (RAG, DSPy) and an evaluation framework for a RAG knowledge base on SAP HANA and SAP AI Core.

South-East Asia Market Unit Lead | 2021 to 2022

- Led a virtual team of about 8 specialists across Singapore and Malaysia, with upskilling plans and demand-based resource management.

EIM Practice Lead APJ | 2017 to 2020

- Grew the SAP MDG practice from zero to about 10 engagements a year within three years, through market positioning and pre-sales leadership.
- Led pre-sales across APJ: solution demonstrations, executive workshops and RFP input.

Selected SAP delivery, 2015 to 2026

- Global bank, Singapore: solution lead for the move from a legacy governance tool to SAP MDG. Led a team of 5 through design, build and test.
- Federal government, Australia: designed SAP MDG for finance, material, supplier, customer and custom objects, with BRF+ rule-based workflow. Led a team of 5.
- Diversified conglomerate, Philippines: solution architect for supplier and material master from 5 subsidiaries, with SAP MDG integrated to Ariba SLP. Led 10 consultants.
- Agribusiness conglomerate, Malaysia: designed SAP MDG, Data Services and Information Steward for material master standardisation, and defined the data management operating model. Led 5 to 10 consultants.

SAP Functional Lead (contract) | Fonterra Co-operative Group | Auckland | 2013 to 2014

- Led 10 to 15 consultants as functional lead to deliver the first SAP MDG implementation in Australia and New Zealand: MDG for customer and supplier, then material, with data model extensions and custom objects.

Master Data Management Consultant | Ericsson | Stockholm | 2007 to 2011

- Moved from technical lead to solution expert for SAP NetWeaver MDM and SAP PI across seven full software lifecycles. Development lead for 12 onsite and 5 offsite team members.

Selected AI Work

Enterprise AI at SAP

- PII anonymisation evaluation framework (SAP Enterprise Data team fellowship, 2025 to 2026): compares a naive prompt baseline, DSPy chain-of-thought and GEPA-optimised prompts against existing anonymisation tools, across seven languages with code-switching test cases, on SAP AI Core.

Independent builds

- AgentDQ (proof of concept, 2026): multi-agent data quality system for SAP material master data. Agents profile the data and propose rules for human approval; a deterministic executor runs the approved rules. Designed, directed and tested the build with AI coding agents. LangGraph, DSPy, rapidfuzz, 245 tests. Cut duplicate-match decoy errors from 78% to 39% by changing the fuzzy matching method.
- KaKi-Talkie (prototype, group design-thinking project, 2026): voice kiosk that answers elderly residents' questions on government schemes in English and Malay. Local speech, language and retrieval models on one Mac mini, with source-cited answers and a refusal gate for weak evidence. Sole developer; four-week build with numbered acceptance tests.
- LinkedIn article series on the AgentDQ design decisions (two articles published).

Academic research

- NTU MSc capstone with the Singapore Food Agency (2025 to 2026): LLM-based extraction of pathogen assay data from scientific papers. DSPy and GEPA raised strict micro-F1 from 0.52 to 0.65.

Education and Certifications

- Master of Science in Artificial Intelligence, Nanyang Technological University, Singapore, 2026
- Bachelor of Engineering (Honours) in Computer Engineering, Nanyang Technological University, Singapore, 2005
- SAP Certified: Generative AI Developer
- SAP Certified: SAP Master Data Governance
- P_EA_1 Certified Professional SAP Architect
- In progress: Microsoft Certified Azure AI Apps and Agents Developer Associate (AI-103); AWS Certified AI Practitioner (AIF-C01); IAPP AIGP
